

PRESSURIZED PLASTIC BOTTLE WITH REINFORCED NECK AND SHOULDER  
FOR DISPENSING AN AEROSOL

ABSTRACT

5           A pressure resistant plastic bottle for containing and dispensing an aerosol  
composition. The plastic bottle is designed to reduce deformation by a local  
reinforcement to the neck and shoulder regions. The reinforcement preferably comprises  
the provision of a wall thickness for a lower portion of the neck as compared to the wall  
thickness of the upper portion of the neck to be increased by a ratio of from about 1.25:1  
10   to about 2.5:1.
